Support Center Solution Improves Customer Experience

Comprehensive Support Center Design, Managed Services and Operations Exceeds International Medical Device Company's Expectations

The Challenge

Improve the experience for all customers when communicating with the medical device division of global healthcare products and services provider, Johnson and Johnson.

Reduce customer call times, improve communication delivery and improve customer loyalty through first impressions (customer support center). Reduce facility needs to allow for company growth in other areas of business.

The Evaluation

Work with suppliers in the customer support business arena to find the best partner to deliver and balance against company goals and customer expectations. Through multiple partner evaluations, Solugenix was chosen based on its ability to support:

- Long-term agent staffing resources
- Significantly reduce recurring expense related to a steep learning curve training when on-boarding new resources
- Ability to continually increase efficiencies and quality of service
- Optional support from an offsite or onsite facility
- Fully managed approach in order to meet service levels

Solution

Solugenix partnered with the client and provided a comprehensive solution by transitioning support center services to the Solugenix Brea, CA support center facility.

Solugenix supplied seasoned and extensively-trained agents for the Technical and Clinical support center for 24/7/365 business operations, sustainable repeatable training, knowledge management process, quality control measures and regular operational reporting. After the successful delivery of these services, JNJ awarded Solugenix two additional managed services engagement to perform product complaint follow-ups and field service dispatch coordination.

Customer Profile

Company

Advanced Sterilization Products, a division of Johnson and Johnson, is an international medical device company with 1500 employees worldwide. The company maintains a commercial presence in more than 160 countries.

Team

Established formal leadership structure including a management team, supervisor and team lead backed by a Center of Excellence team to ensure best practices implementation, along with quality control, compliance process and continuous process improvement.
